

Book_A_Taxi: Front-end Starter

Course-end project write-up

A React front-end starter for the Book_A_Taxi taxi booking website: homepage, About Us, Services and Contact pages, linked navigation, and a booking page with form validation.

How to run

`npm install` then `npm run dev`, open `http://localhost:5173`. Build with `npm run build`.

Project structure

```
src/  
  components/  Layout, Navbar, Footer, PageHeader, FormField  
  pages/       Home, About, Services, Booking, Contact, NotFound  
  data/        navLinks.js, services.js  
  utils/       validation.js
```

Tasks completed

Task	What was done
1. Front-end starter and homepage	Vite + React project with a structured folder hierarchy (components, pages, data, utils) and a homepage with hero, how-it-works and popular services.
2. About Us, Services and Contact pages	Three React page components sharing one layout, header style, cards and footer for a consistent design.
3. Linked navigation	A shared Navbar and Footer render from one link list (src/data/navLinks.js), so every page links to every other page. The active page is highlighted and the menu collapses on mobile.
4. Booking page	A /book page with service selection, pickup/drop-off, date, time, passengers and notes. Service cards link to it with the service pre-selected (/book?service=airport).
5. Form validation	Inline validation on blur, change and submit; required fields, email and phone format, past dates/times, pickup different from drop-off, passenger limits. Valid submissions show a confirmation with a reference number.
